Re: World Trade Center - WTC-110.00

Attn: Mr. R. M. Monte
Construction Engineer

Gentlemen:

We request the approval of installing Cafco blaze shield Type D fireproofing in lieu of the rigid insulation now being applied at the underside of the 9th floor slab. Specifically, we request approval of utilizing ¼" of the above spray-on insulation for the 1" styrofoam. This spray-on to be applied in all areas as outlined in the specifications with the exception of the underside of the 9th floor in Tower A only. The purpose of requesting this substitution is solely as a matter of expedience and for the progress of the project. Installation will be performed by the firm of Mario N. DiBono, once approval can be received and a suitable working condition resolved between our firms. Under separate cover we are sending a brochure describing the material and its properties.

Your cooperation and consideration in this matter is appreciated.

Very truly yours,

STAR-CIRCLE WALL SYSTEMS, INC.
